DETAILED ACTION

1. Applicant's election of Group II, Claims 6-7 and 10-11 in papers filed 27 May 2003 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Claims 1-5, 8-9 are withdrawn from consideration.

Applicant's amendments to Claims 6-7 and 10-11 and addition of Claims 12-95 in papers filed 27 May 2003 necessitate the following restriction requirement.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 6, 10, 12-47, 66-71, 74-77 drawn to a method of depositing nucleic acids encoding an amino acid onto a substrate, classified in class 435, subclass 174.
 - II. Claims 7, 48-65, 72-73, 88-95 drawn to a method of translating an amino acid classified in class 438, subclass 68.1.
 - III. Claims 11, 78-87, drawn to a method of transmitting and receiving amino acid information, classified in class 700, subclass 1.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are independent and distinct methods. Inventions are independent and distinct if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have different modes of operation and different functions. The method of Invention I operates by providing nucleic acids encoding amino acids onto a

Art Unit: 1634

substrate and the method functions to provide address-specific nucleic acids. The method of Invention II operates by contacting a plurality of nucleic acids encoding a hybrid amino acid with a translation effector and the method functions to the hybrid under conditions permissive for hybrid binding to a binding agent. The method of Invention III operates by transmitting to a user and receiving from a user amino acid-specific information and the method functions to dispose user-specific nucleic acids onto a substrate.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter; and because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and III, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
